improving dermatology through technology

improving dermatology through technology

Company Profile

derm.md (www.derm.md) was founded in 1999 as part of an online Dermatology resident education resource. The organization was originally formed to assist resident physicians by facilitating the exchange of study materials, notes, etc. After experiencing high demand for technology-related information in the field of Dermatology (imaging, digital cameras, handheld computers, etc.), we created a resource that provides expert opinion and relevant software and hardware products.

Present

Since that time, we have assembled a team of dedicated individuals and evolved from an educational content provider to an experienced group of developers creating original web-based and handheld software solutions. The founders have given over 20 invited lectures (nationally and internationally) and continue to publish on various topics relating to technology in Dermatology.

Our original research and innovations in the fields of imaging and data capture tools has been presented at national meetings in Dermatology, Dermatologic Surgery, and Pathology. We have also had the honor of partnering with the following organizations to help promote their mission through the creation of automated software solutions: American Society for Dermatologic Surgery, American Society for Lasers in Surgery and Medicine, and the American College for Mohs Micrographic Surgery, Cutaneous Oncology, Skin Disease Education Foundation and The International Society of Dermatology.

Future

derm.md is using technology to change the face of Dermatology education. In the future, Dermatologists in practice and training will have easier access to relevant information to help make clinical decision and enhance patient care. Please visit us at www.derm.md and my.derm.md and learn more about leveraging the power of technology in your practice.
